## SPECIFICATIONS OF STANDARD DIETS

#1310	Rats/Mice, Breeding Diet.....	1
#1310 P	Rats/Mice, Breeding Diet, Deficient in Phytoestrogens.....	2
#1320	Rats/Mice, Maintenance Diet.....	3
#1320 P	Rats/Mice, Maintenance Diet, Deficient in Phytoestrogens.....	4
#1410	Mice, Breeding/Maintenance Diet, Suitable for Transgenic Animals, Nude Rats & Nude Mice.....	5
NIH No. 31M	Mice, Breeding Diet, Autoclavable (Open Formula Diet).....	6
#2010	Rabbits, Breeding Diet.....	7
#2020	Rabbits, Maintenance Diet.....	8
#2110	Rabbits, Breeding Diet, Rich in Crude Fibre.....	9
#2120	Rabbits, Maintenance Diet, Rich in Crude Fibre.....	10
#3010	Guinea Pigs, Breeding Diet.....	11
#3020	Guinea Pigs, Maintenance Diet.....	12
#3110	Guinea Pigs, Breeding Diet, Rich in Crude Fibre.....	13
#3120	Guinea Pigs, Maintenance Diet, Rich in Crude Fibre.....	14
#4130	Dogs, Breeding/Maintenance Diet.....	15
#6010	Non-Human Primates, Breeding Diet.....	16
#6020	Non-Human Primates, Maintenance Diet.....	17
#6830	Tree Shrews, Breeding/Maintenance Diet.....	18
#7010	Hamsters, Breeding Diet.....	19
#7020	Hamsters, Maintenance Diet.....	20
#9010	Minipigs, Breeding Diet.....	21
#9020	Minipigs, Maintenance Diet.....	22
#9030	Minipigs, Breeding Diet, High-Energy.....	23
#9050	Minipigs, Maintenance Diet, Rich in Crude Fibre.....	24
#0130	Small Ruminants, Breeding/Maintenance Diet.....	25
#0630	Marmosets, Breeding/Maintenance Diet.....	26
Xenopus	African Clawed Frogs, Xenopus Laevis, Breeding/Maintenance Diet.....	27

## MISCELLANEOUS

# Medicated Diets for Laboratory Animals

## G M P - A C C R E D I T A T I O N

according to §13 German Drug Law

Altromin is accredited according to Good Manufacturing Practice by the Ministry for Nature, Environment and Consumer Protection (LANUV, Germany). Therefore, Altromin is permitted to produce veterinary pharmaceuticals, particularly medicated animal feeds in compliance with §13 and §56 German Drug Law. The 13<sup>th</sup> revision of German Drug Law associated with harmonization of European legislation required an enhancement of Altromin's GMP certification. On completion of putting up a new laboratory, after equipment qualification and validation a detailed GMP audit to check quality management documentation and procedures as well as engineering, construction and production flow was performed by the responsible authority. A continuous compliance with the terms of European GMP guideline was confirmed by the competent officials. Altromin has been certified and approved for production of veterinary pharmaceuticals.

Inside the range of biomedical research, it is sometimes necessary to treat a huge quantity of laboratory animals. Medicated animal diets are the best solution to administer a drug mixed into a standard diet. This option is an easy-to-use and manageable possibility for animal keepers and veterinarians. Animals do not have to be adjusted to another animal feed due to application of traditionally standardized high-quality diets from Altromin.

We are very pleased to be able to offer you this special service. For all questions and scientific customer advisory services, please do not hesitate to contact our scientific staff.

## LEGAL REQUIREMENTS

for Manufacturers & Responsible Veterinarians

Production and distribution of medicated animal feeds is strictly regulated by law. Since the year 2005, European administration has been sharpening law according to European GMP guideline. The attending veterinary physicians as well as accredited manufacturers are liable to stricter regulatory controls to provide evidence for transactions with veterinary pharmaceuticals.

Please note:

- Production of medicated feeds is incumbent upon pharmaceutical companies which are accredited in compliance with §13 German Drug Law.
- Manufacturing orders given by veterinarians to producers of compound animal feedstuffs is illegitimate. Pharmaceuticals have to be prescribed to the pharmaceutical company.
- With few exceptions, only released drug premixes are free to use for medicated feeds (§56 Drug Law).
- Veterinarians are entitled to obtain pharmaceutical premixes but are not allowed to deliver it to manufacturers.
- Before dispensing and putting into circulation of ready-to-use veterinary pharmaceuticals, a qualified person (approbated pharmacist) has to check and verify the pharmaceutical quality. Release results on basis of documentation and analytical verification of final concentration inside the finished product.
- Medicated animal feeds have to be delivered directly to the responsible veterinarian or the supervised animal facility, respectively.

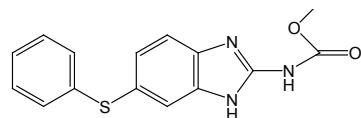

## TREATMENT OF OXYURIASIS?

Medicated Animal Feed with Fenbendazole

Fenbendazole is a broad-spectrum anthelmintic which is applied to treat oxyuriasis, an involvement due to endoparasites such as nematodes and cestodes. Fenbendazole has an effect as microtubule inhibitor and harms the cytoskeleton of parasites. The worms die and will be excreted in faeces. By specifically damaging the parasitic metabolism, the substance has an ovicidal effect, too.

Methyl-5-(phenylthio)-2-benzimidazolecarbamate  
Chemical Structure of Fenbendazole

Usually, fenbendazole is well-tolerated but the drug has a slow effect. Therefore, a sufficient contact time to the parasite is required. Fenbendazole will marginally be resorbed inside the intestine, hence a considerable and also metaphylactical medication is applicable. Medical treatment of an animal population using medicated animal feeds is unspecific and the risk of reinfection of treated animals through invasive animal-animal communication is high. Drug application should be done over a long period including temporary interruptions. Addition of 50, 100 and 150ppm of fenbendazole is possible, whereby an effective dose of 150ppm is used for feeds which are designated for autoclavation, only. Heat treatment effects a reduction of 20 up to 40% of the active ingredient. Following basic diets are available with fenbendazole:

- #1310 Rats/Mice, Breeding Diet
- #1320 Rats/Mice, Maintenance Diet
- #1410 Mice, Breeding/Maintenance Diet

# TPF - Totally Pathogen Free Diets

Our scientists and technologists have developed a completely new manufacturing method which effectively reduces the microbio-logical germ status comparable to autoclaved or irradiated feedingstuff. TPF is particularly suitable for use inside of SPF-barriers or areas where a strictly abacterial status is needed. Using a modern double vacuum packaging, the risk of recontamination can be eliminated. TPF animal feed is available as high standardized breeding and maintenance diets for rats and mice as 10mm pellets.

The advantages of TPF at a glance:

- Time and cost-savings due to elimination of autoclaving and irradiating process
- No changes in chemical and nutritive characteristics as an effect of heat
- 30% cheaper than irradiated animal diets
- Safety - TPF will be delivered with a batch-related microbiological report
- Sterile, double vacuum packaging avoids recontamination
- Upper foil can be removed to channel the packages into a barrier e.g. via dip tank
- 12 months guaranteed minimum durability
- Lightweight, manageable packages in 5 kg, 2 packages per unit
- Standardized breeding and maintenance diets in well-known Altromin quality

To fulfill the special requirements of biomedical research, especially the increasing quantity of transgenic animals, with immediate effect Altromin provides the effective TPF diets for (transgenic) mice as well as for nude rats and nude mice, too. The compositions of the diets are specially adjusted accordant to nutritive requirements of these animals and which are characterized by a higher demand on energy. For usage inside of SPF barriers, we take care of a strictly germ-free status of our TPF diets - that means cost and time-savings for the user because irradiation or autoclivation is not necessary any longer!

Using a highly innovative manufacturing method, (pathogen) germs and spore-forming units are eliminated during the production process. The diets are packaged under controlled aseptic conditions. A batch-related microbiological certificate of analysis is inclusive! An assimilation of the animals is not necessary since the composition as well as nutritive values are in accordance to traditional Altromin diets.

Following diets are available as TPF:

<b>1310 TPF</b>	Breeding Diet for Rats and Mice
<b>1320 TPF</b>	Maintenance Diet for Rats and Mice
<b>1410 TPF</b>	Breeding / Maintenance Diet for (Transgenic) Mice

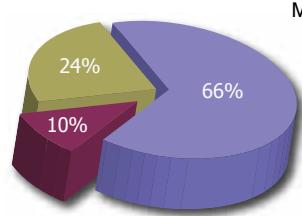

# Diet-Induced Obesity & Adjusted Calories Diets

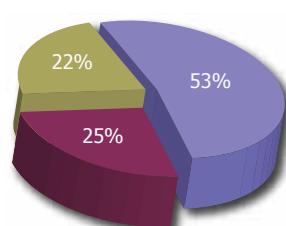

## High-Fat Diets up to 42% Crude Fat (70% kcal% Fat)

Rodent Purified Diet used for Obesity & Diabetes Research. Available as **10mm pellets!**

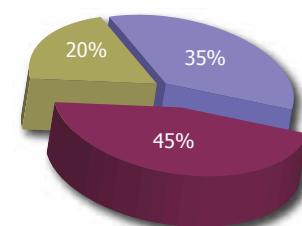

Adjusted Calories Diet - 10% kcal% Fat

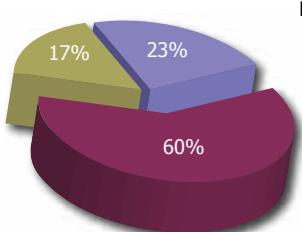

Adjusted Calories Diet - 25% kcal% Fat

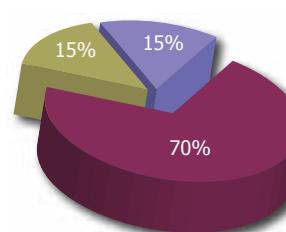

Adjusted Calories Diet - 45% kcal% Fat

Adjusted Calories Diet - 60% kcal% Fat

Adjusted Calories Diet - 70% kcal% Fat

# Introduction of Standard Diets

Altromin standard diets are complete animal feed for breeding or maintenance of laboratory animals and therefore suited for all development and life stages of the animals.

Our standard diets are generally designed for an ad libitum feed intake. However, for some animals, e.g. minipigs and particularly for certain mice strains or breeding lines, it can be necessary to restrict the feed consumption to avoid health injuries or change to a diet with a lower energy content.

Following additional options are available for all feeds on request:

- Specially composed diets as „**Deficient in Nitrosamines**“ and/or „**Deficient in Phytoestrogens**“.
- **Autoclavable** feeds with a specifically increased content of vitamins (Fortified).
- **Irradiated** feedingstuffs with dose rates from 5 up to 50 kGy.
- „**Certificated**“ feeds – with a batch-related certificate of analysis.

Standard diets for other animal species which are not mentioned in this catalogue, e.g. ferrets, gerbils, cats and others, are also available on request. For special and experimental diets as well as Open-Formula diets, please have a look at our website or contact our scientific staff.

## Available Packaging Options

Open-mouth paper bags	10 – 25 kg
Needled paper bags	10 – 25 kg
Aseptic PE-bags, heat-sealed	10 – 25 kg
Vacuum packaging, paper-plastics	1 – 10 kg
Vacuum packaging, plastics-plastics	2.5 / 5 kg
Big Bags	max. 800 – 1.000 kg

## Annotation:

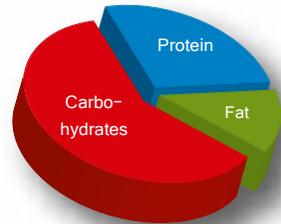

The following nutrient values are calculated averages in air-dry substance. The analytical values may vary due to natural variations of the biological raw materials. All data presented in this catalogue are based on our current knowledge and experiences as well as of current analyses. The author reserves the right not to be responsible for the topicality, correctness, completeness or quality of the information provided. Liability claims regarding damage caused by the use of any information provided, including any kind of information which is incomplete or incorrect, will therefore be rejected.
